

## **Postdoctoral Fellowships at the National Center for Ecological Analysis and Synthesis (NCEAS)**

The National Center for Ecological Analysis and Synthesis, at the University of California, Santa Barbara, invites applications for Postdoctoral Associates. NCEAS promotes the analysis and synthesis of scientific data to address important ecological questions. Applications are open to all areas of inquiry, with interdisciplinary projects ranging across the sciences and into many allied disciplines such as economics, education and the sociology of information. Postdoctoral appointments offer an unusual opportunity with the advantages of both independence and collaboration with working groups, including scores of researchers in diverse fields.

Since 1995, NCEAS has hosted 4,000 individuals and supported over 400 projects that have yielded more than 1,400 scientific articles. The Center's work is based on the use of existing data and information and does not support field or laboratory research.

Associates are appointed for up to two years with a third year possible. Associates receive a salary of approximately \$45,000.00, plus benefits, a discretionary fund, mentoring funds, and access to all Center and UC Santa Barbara facilities. Recruitment deadlines are twice a year, in January and July. For additional information and application instructions, go to:
