

## Fall 2020 Seminar Series

### Can Healthy Soil Promote Healthy Ecosystems in Rangelands and Croplands?

In celebration of our 25th Anniversary, the National Center for Ecological Analysis and Synthesis (NCEAS) invites you to join us for a panel discussion exploring how the NCEAS collaborative working group model accelerates scientific discovery and environmental solutions. Geoff Willard, Deputy Director of Science for Nature and People Partnership (SNAPP) will be talking to Dr. Steve Wood, Senior Scientist for Agriculture & Food Systems from The Nature Conservancy, and Chelsea Carey, Working Lands Research Director & Principal Soil Ecologist from Point Blue Conservation Science about their recent work examining how healthy soil promotes healthy rangeland and cropland ecosystems in California and the midwest. By partnering with farmers, nonprofit organizations, and academic researchers, this research informed new data visualization tools for use in conservation agriculture and enhanced understanding about the need to rebuild soil organic carbon for sustainable land stewardship.

**Thursday, November 19, 2020 | 12 PM to 1 PM PST**
